ECOMMERCE SALES ANALYSIS 2012 TO 2014

INSIGHTS

KPI CARDS
The business generated $2.3M in revenue across 5,009 orders. However the profit margin of 12.47% sits below the 15-20% ecommerce industry benchmark, suggesting pricing, discounting or cost structure needs review heading into 2026.

CATEGORY CHART
Technology is the top revenue-generating category at $0.84M (36.6% of total revenue). However the three categories are closely bunched — a focused push on Technology could significantly widen the lead and grow overall revenue in 2026.

CITY CHART
New York City alone generates $256K — nearly 50% more than the second city Los Angeles. The top 5 cities account for the bulk of revenue. Investing in marketing and logistics in these cities will have the highest return in 2026.

SHIPPING MODE
First Class shipping is the most profitable mode at 13.93% margin and delivers in just 2.18 days. Standard Class dominates volume but at the lowest margin. A strategy to upsell customers from Standard to First Class could improve both customer satisfaction and overall profit margin in 2026.

PAGE TWO

KPI CARDS
Revenue is growing strongly at 20.62% but profit growth lags behind at 14.41% — meaning the business is working harder for less profit. The average 20% discount and 1,318 loss-making orders (26% of all orders) are the primary threats to profitability heading into 2026.

MONTHLY TREND
Sales follow a clear seasonal pattern peaking in Q4 (October–December) reaching $0.3M monthly. January and February are the weakest months. For 2026 the business should plan inventory buildup by September, run promotional campaigns in January–February to boost slow months, and capitalize on the natural Q4 surge with targeted marketing.

SEGMENT CHART
The Consumer segment drives over 50% of revenue at $1.16M. However Corporate customers at $0.71M represent high-value accounts worth nurturing with dedicated account management. Home Office at $0.43M is underdeveloped and could be grown with targeted B2B2C campaigns in 2026.

DISCOUNT CHART
The data clearly shows that discounts above 20% generate negative profit. Orders with no discount produce $0.32M profit while heavily discounted orders lose $0.03M. Capping discounts at 15-20% maximum could recover significant profit in 2026.

RECOMMENDATIONS

1.DISCOUNT POLICY
Cap all discounts at maximum 20%
Remove 40%+ discount approvals entirely
Estimated profit recovery: +$30,000–$50,000

2. SHIPPING STRATEGY
Promote First Class shipping to customers
It has highest margin (13.93%) + fastest (2 days)
Reduce Standard Class dependency

3. GEOGRAPHIC FOCUS
Double down on New York & Los Angeles
These two cities alone = $432K revenue
Expand to underperforming cities with promotions

4. SEASONAL PLANNING
Stock up inventory by September for Q4 peak
Run January–February promotions for slow months
Budget marketing spend heavily toward Q4

5. CATEGORY INVESTMENT
Technology is leading invest more here
Expand Technology product range for 2026
Review Office Supplies margin lowest revenue

6. CUSTOMER RETENTION
781 repeat customers is the core base
Launch a loyalty program for repeat buyers
Target Corporate segment with account managers

7. LOSS ORDER REDUCTION
1,318 orders (26%) are losing money
Audit these orders identify common patterns
Likely caused by high discounts + returns
